New Band-IT application tool launched locally

Banding & Identification Solutions Africa has introduced an application tool that's ideal for hose clamping, designed to replace band and buckle systems in high volume applications.

Authorised distributor of engineered band clamping and fastening solutions, Banding & Identification Solutions Africa (Banding & ID Solutions), has launched the compact and easy-to-use Ultra-Lok UL4000-C Application Tool from Band-IT, a company with over 70 years of experience in stainless steel clamping, banding, bundling, fastening and identification solutions. The tool can be used by various industries, including beverage processing.

Tighter lock

'The Ultra-Lok UL4000-C has increased power, which works in combination with the exclusive Ultra-Lok high tensile grade 201 stainless steel clamps in order to form a tighter,

consistent lock under full tension. The UL4000-C ensures that every clamp has the same strength and holding characteristics regardless of

when and where it was installed or who installed it,' comments Banding & ID Solution's business manager Rosa Remendos. Developed by US company Band-It IDEX, this has proved to be an importing nightmare due to the deterioration of the Rand to the dollar. However, Remendos believes that it conforms to the company's strategy of supply quality product and is worth the little expense.

Powerful and portable

'It's one of the most powerful portable band clamp installation tools on the market,' assures Banding & ID Solution's director, Terry O'Kelly. 'It's powered by a Lithium-Ion battery that holds a charge for longer with consistent peak performance through the life of the battery.' He also notes that it's important to recognise that the tool is safer, as a faster, stronger, tighter and easier installation results in less time in the work zone and fewer call backs.

The company offers training, as well as repair and maintenance service, in-house. 'The Ultra-Lok UL4000-C Application Tool comes fully assembled in a custom protective case that's made from impact-resistant HDPE thermoplastic. Included is a spare 18 V Lithium-Ion battery, a battery charger, and tool lubrication/assembly tool kit,' concludes Remendos. □
